The **Futsal SKILLZ** clinic is designed to promote quick decision-making and good ball control in a reduced-space field of play. As considered by many soccer-leading countries, futsal is the preferred method of developing players. The small space and high pace game promote subconscious development of young players. Through a child-centered environment, players will receive guidance on the proper techniques that can be used to become creative and productive while playing the sport. All days will start with a Strength, Agility, and Quickness session.
